DETAILED ACTION

Response to Amendment

1. This office action is in response to the amendment filed on 10/26/2006. Claims 1 and 2 are pending in the instant application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102(e) that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Lee et al (USPUB 20050141457), hereinafter referred to as Lee.

Re claim 1, Lee discloses associating a prior access point (AP) to potential APs based on a neighborhood graph showing one or more APs fit for handoff (*associating a first AP and a second AP when the first AP and the second AP have overlapping coverage areas*, paragraph [0043], lines 5-8). Lee discloses generating a neighborhood graph (*a topology map*) based on a handoff procedure (*establishing a topology map based*

on traffic patterns in the wireless network, paragraph [0045], lines 20-22). Lee discloses a station sending a reassociation request message (figure 5, step 501) to AP_A (*upon establishment of a communication session between the wireless device and the first access point*, paragraph [0061], lines 1-2) and then AP_A propagating context of a given station (figure 5, step 501) to a potential AP (*transferring information associated with the wireless device to the second access point*, paragraph [0061], lines 11-13), said transferred information including session parameters (context) relating to communication sessions between the wireless device and the wireless network such that disruption of communication between the wireless device and the wireless network during a turnover of communication with the wireless device from the first access point to the second access point is minimized (paragraph [0058], lines 7-9).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lee in view of Ritter et al (U.S 5570084), hereinafter referred to as Ritter.

Re claim 2, Lee discloses all of the limitations of the claim as shown in the rejection of claim 1, but fails to disclose associating a first AP and a gateway coupled to a second AP. Ritter discloses a system where an AP is connected to the network via a bridge/router (element 26, figure 1). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify wireless network of Lee by adding to it a gateway coupled to an access point. The motivation to combine is to get the benefit of using a gateway in routing packets between the wireless network and the wired network or between wireless nodes serviced with different APs.

Response to Arguments

6. Applicant's arguments with respect to claims 1 and 2 have been considered but are not persuasive.

On page 4 of the Remark, applicants argue that Lee does not disclose establishing a topology map based on traffic patterns in the wireless network. The Examiner respectfully disagrees. Lee discloses generating a neighborhood graph (*a topology map*) based on a handoff procedure (*establishing a topology map based on traffic patterns in the wireless network*, paragraph [0045], lines 20-22) as described in the rejection of claim 1.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP §

706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR

1.136(a). A shortened statutory period for reply to this final action is set to expire

THREE MONTHS from the mailing date of this action. In the event a first reply is filed

within TWO MONTHS of the mailing date of this final action and the advisory action is

not mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the

advisory action. In no event, however, will the statutory period for reply expire later than

SIX MONTHS from the date of this final action.
